

Easy Chair

The Easy Chair combines practical applicability with great comfort. Available in a wide colour scale and appearances, the Easy Chair can very well be used in both projects and living rooms.

The latest technology in the field of furniture construction is used on the Easy Chair, i.e. Frame Foam. This specially designed firm yet lightweight polyurethane foam offers great freedom in the shape of the construction. Laid in with different sorts of soft foam it provides the Easy Chair with the combination of practical applicability and great comfort.

The multifunctional Easy Chair can be used as a single chair, but multiple chairs can form a couch or chaise longue easily.

The Easy Chair is upholstered with Interglobe Wool from Gabriel. This durable and flame-retardant fabric is deliverable in 60 colours. For the dyeing and after-treatment only environmentally correct products are used, and the colours are completely free of heavy metals. Beside the many choices of colour, different colours can be combined in one chair or/and the seams can be stitched in a contrasting colour. This all gives the Easy Chair an enormous amount of possible executions, and allows the Easy Chair to be used in projects as well as the living room.
